Dimensional Analysis (Cookson, 2013) Dimensional analysis (DA) or factor-label method uses a series of conversion factors of equivalency from one system of measurement to another but doesn't require memorizing specific formulas. This method reduces errors and can be used for all dosage calculations. To set up the equation, start with the ...

In this lesson we're going to talk about dimensional analysis. I wrote med math made easy here because we honestly believe that dimensional analysis is the best way to go when it comes to dosage calculations. The biggest benefit I see to dimensional analysis is that it means you only have to know ONE process.

It's useful for something as simple as distance equals rate times time, but as you go into physics and chemistry and engineering, you'll see much, much, much more. I would say, hairy formulas. When you do the dimensional analysis, it makes sure that the math is working out right. It makes sure that you're getting the right units.

A student attending one of Kimball Group's recent onsite dimensional modeling classes asked me for a list of "Kimball's Commandments" for dimensional modeling. We'll refrain from using religious terminology, but let's just say the following are not-to-be-broken rules together with less stringent rule-of-thumb recommendations. Rule #1: Load detailed atomic data into dimensional ...
