the engine stop, but many of the parts are likely to be damage beyond repair.

Importance of Lubrication and Cooling Systems in an Engine

CONCLUSION Cooling:-
A cooling system must be provide not only to prevent damage to the vital parts of the engine(due o high temperature), but the temperature of these

Cooling of the engine parts is accomplished by keeping the coolant circulating and in contact with the metal surfaces to be cooled. The operation of a liquid- cooled system is as follows: The pump draws the coolant from the bottom of the radiator, forcing the coolant through the water jackets and passages, and ejects it into the upper radiator
