Inaccuracies in Children's Testimony eBook by Letitia C ...

Recall was found to be accurate, even after a long time, and two misleading questions inserted by the research team had no effect on recall accuracy. One weakness of this study was that the witnesses who experienced the highest levels of stress were actually closer to the event, and this may have helped with the accuracy of their memory recall.

Eyewitness Testimony | Simply Psychology

An eyewitness testimony is a statement given under oath by a person present at an event who can describe what happened. During circumstances in which a child is a witness to the event, the child can be used to deliver a testimony on the stand. The credibility of a child, however, is often questioned due to their underdeveloped memory capacity and overall brain physiology.
