There are few studies in the history of psychology as renowned as the Stanford prison experiment (SPE) (Haney, Banks, & Zimbardo, 1973), and few psychologists as recognizable as the study's principal investigator, Philip Zimbardo. The SPE has influenced music, film, and art and has served as a testament to the power of "bad" systems and a counterbalance to "bad" person accounts of ...

Language processing is a trait of human species. The knowledge about its neurobiological basis has been increased considerably over the past decades. Different brain regions in the left and right hemisphere have been identified to support particular language functions. Networks involving the temporal cortex and the inferior frontal cortex with a clear left lateralization were shown to support ...

The Brain Basis of Language Processing: From Structure to ...

Evolution is the process of change in all forms of life over generations, and evolutionary biology is the study of how evolution occurs. Biological populations evolve through genetic changes that correspond to changes in the organisms' observable traits. Genetic changes include mutations, which are caused by damage or replication errors in organisms' DNA. ...
