The relation between phase difference and path difference is very simple to understand. These two are directly proportional to each other. For any two waves with the same frequency, Phase Difference and Path Difference are related as - Δx is the path difference between the two waves, while $\Delta \phi$ is the phase difference between two consecutive waves.

The fracture energy is defined as the ability of materials for the absorption of postcrack energy, and it represents the energy that the material will absorb during failure. Alternatively, it can be expressed as energy required to opening a unit area of the crack surface. Moreover, fracture energy is a key factor in characterizing concrete's postpeak behavior; thus, the incorporation of RPAs ...
